

Project Design: Furniture Exchange Shop (FES)

Furniture Exchange Shop (FES) wants to develop a simple web application to manage services for exchanging furniture within the Sydney Metropolitan area. The application will allow users to access services online. Some examples of these services include

- A person can register as a seller with FES and provide a current physical address and telephone number as well as a current e-mail address.
- A seller can list furniture on the system through a special Internet form. The form asks for all the pertinent information about the furniture: its category, its general condition, and the asking price. A seller may list as much furniture as desired.
- A buyer can search for furniture. The search engine allows searches by material, brand, category, and keyword
- A buyer can open an account with a credit card to pay for the furniture. The system maintains all this information on secure servers.
- FES application has the email notification system for both buyer and seller
- FES application has a feedback rating system for both buyer

You have just completed your bachelor's studies and got an opportunity to work on this project. You need to design this application based on the FES's requirements.

Week2: Explain the responsibilities of the project manager for this project?
